

California Fertility Partners

WE HELPED CREATE
SOME OF THE WORLD'S
FIRST IVF BABIES.

OUR
BABIES
ARE
NOW 30

AND HAVING BABIES OF THEIR OWN

WHAT SETS US APART?

PIONEERING THROUGH COMMITMENT

For over 30 years we have been pioneers in the field of reproductive medicine, starting with the development of one of the world's first IVF programs, created by Dr. Richard Marrs. Other doctors have learned from our experience, which has helped evolve our field of medicine. Our clinical studies and research continue to lay the foundation for the science of IVF.

PERSONALIZED CARE

California Fertility Partners is a patient-centered fertility practice that pairs technology with individualized treatment for building families. We believe the combination of experience and one-on-one care helps to optimize pregnancy success. Our team of experts works together closely to give you the highest pregnancy rates possible.

VISION

Our vision is to provide comprehensive and compassionate fertility care to our diverse patients from around the world and help them build families of their own.

OUR TREATMENTS

IN VITRO FERTILIZATION

In Vitro Fertilization (IVF) is a treatment process in which eggs are retrieved from the ovaries and then inseminated in the laboratory to create embryos. Once the embryos reach the implantation stage they can be transferred into the uterus, frozen, or biopsied for genetic testing and then frozen for future transfers.

PREIMPLANTATION GENETIC TESTING

Preimplantation Genetic Testing (PGT) is a genetic test performed on embryos to give information on an embryo's genetic health. It is used to help select a genetically normal embryo for transfer and to increase the likelihood of a successful live birth.

GESTATIONAL SURROGACY

Gestational Surrogacy is a treatment option in which embryos created through IVF are transferred into the uterus of a woman genetically unrelated to the embryos.

EGG AND EMBRYO FREEZING

Women can preserve their fertility by freezing their eggs for future use in an IVF cycle. Couples may elect to preserve their fertility by freezing embryos for future embryo transfers. Egg and embryo cryopreservation technology is highly successful today.

LGBTQ FAMILIES

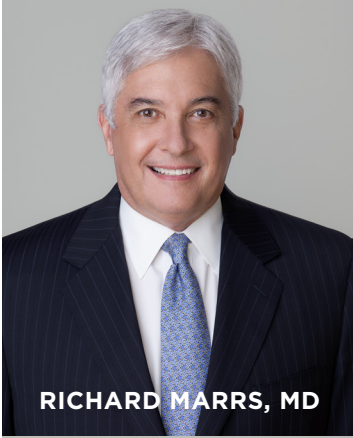

We believe that all individuals have the right to a family. We have been helping gay, lesbian, queer, bisexual and transgender patients from around the world have babies and build families for decades.

REPRODUCTIVE SURGERY

The goal of reproductive surgery is to correct congenital or acquired defects to restore normal anatomy. The physicians at California Fertility Partners are world-renowned for their expertise in reproductive surgical care.

EGG DONATION

One of the most important factors affecting the pregnancy rate with IVF is egg quality, which is directly related to the age of the woman producing the eggs. IVF with eggs from a young, healthy donor provides embryos of optimal quality and pregnancy potential.

RICHARD MARRS, MD

GUY RINGLER, MD

KELLY BAEK, MD

KARINE CHUNG, MD

OUR PHYSICIANS

Richard Marrs, MD

Dr. Marrs developed one of the world's first IVF programs and is regarded as one of the world's foremost experts in reproductive medicine. He made medical history in 1986 with the first pregnancy from a thawed embryo in the United States.

Guy Ringler, MD

Dr. Ringler is a partner and Board Certified reproductive endocrinologist with over 30 years of experience in reproductive medicine. He is internationally known for his work in IVF, surrogacy, and LGBTQ family building.

Kelly Baek, MD

Dr. Baek is a partner and Board Certified reproductive endocrinologist. She has developed a strong local and international practice due to her individualized approach to each patient.

Karine Chung, MD

Dr. Chung is a Board Certified reproductive endocrinologist with over 10 years of clinical experience in reproductive medicine. She has developed an international reputation for her work in egg freezing and fertility care for women diagnosed with cancer.
